

Triple Pocket Fold Basic Template

Tips:

- This project works best with double sided paper, where the two sides coordinate. This does not work well with directional prints (something will end up upside down no matter what).
- Adjust the length and width to change up the finished size to suit.
- Score in half the long way. Score $\frac{3}{4}$ " on each of the shorter sides.
- Cut away the top left corner and the lower right corner, as shown.
- Fold in half the long way along the score line and adhere.
- Fold up at any spot that you like best, and adhere to create three pockets.
- Create three tags to fit inside the pockets.
